DETAILED ACTION

1. Applicant's election with traverse of Specie I (claims 1, 3-24, and 26-42) in the reply filed on 11/09/07 is acknowledged. The traversal is on the ground(s) that "Any of these alternative terminal modules may include contact bank circuits of the type schematically depicted in Figures 1-3. Applicants therefore disagree that there is any unique correlation between or among the terminal modules illustrated in Figures 4-9 and the circuit designs diagramed in Figures 1-3. Applicants also respectfully traverse the specie election requirement on the grounds that a search of the classes appropriate to both the elected and non-elected specie would necessarily include the Patent Office classes in which both would be searched. This is not found persuasive because as described in a specification on pages 18-19 that defined there are fifth embodiments disclosed in the invention, figures 1-3 that describe three embodiments, figure 7 is fourth embodiment, and figures 8-9 is fifth embodiment. Figure 4 is belongs to figure 1, and figures 5-6 are belongs to figures 2-3 respectively. Thus. The search for each of the embodiments would be classified in separate classification, and different field of search.

Claims 3-22, 24-26, 28, 31, 37, 39, and 42 do no read on Specie I (figures 1 and 4), for example, the limitations of "over-voltage protection component or splitter assembly" would be read on figure 8. Therefore, claims 2-22, 24-26, 28, 31, 37, "and 42 are withdrawn from further consideration as being drawn to non-elected subject matter.

The requirement is still deemed proper and is therefore made FINAL.

Art Unit: 2841

Noted: The phrase of "can be" employed, as requires' is not understood because the term "can be" recites to a broad range or limitation followed by linking terms and a narrow range or limitation within the broad range or limitation is considered indefinite since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired.

Claim Objections

2. Claim 1 is objected to because of the following informalities:

Claim 1, line 9, change "the contacts" to - - contacts - - for proper antecedence basis.

Regarding claim 1, line 11, the phrase of "a smaller number of outlet contacts than of tapping contacts" is not understood. What does applicant mean to?

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2841

4. Claims 1, 23, 27, 29-30, 32-36, 38-39, and 41 are rejected under 35

U.S.C. 102(e) as being anticipated by Reimold et al. (U.S. Patent 6,211,582).

As to claims 1, 23, 27, 29, 36, 38, 41, Reimold et al. discloses a terminal, insulating, or supplementary module (41) having a contact bank (54) as shown in figures 8-17 including: a plurality of tapping-contacts (58, 59, see figure 8) directly and permanently electrically connected in the terminated condition of said contact bank (54), a plurality of remote-controllable switches (64, 89) configured to electrical or electro-mechanical, and a control device (90).

As to claims 30, 33-35, Reimold et al. discloses the switch which is a relay or semiconductor device.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kirma and Longueville et al. disclose related art.
